

When bell of exceeding capacity rang, don't get into elevator by force. Accident like falling may happen due to exceeding capacity.

Don't rush, shake and kick within elevator. It may cause malfunction such as hanging of elevator in the intermediate position between floors

Don't throw water or dirt into elevator gap. In particular, don't let water flow into gap upon water cleaning of elevator way. Elevator may show abnormal movement due to trouble of electric devices.

Don't touch at random or handle violently various buttons or switches within operating panel (emergency stop switch, interphone, switches within switch box of operating panel). They could not be used due to trouble upon emergency

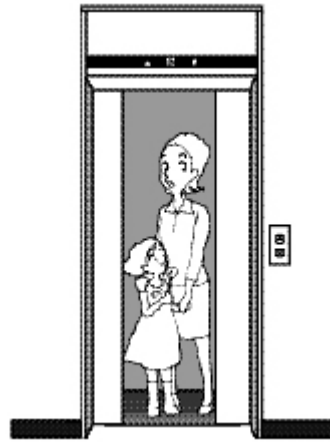

When door is opened and closed, be careful so that hand or clothes is not caught in a crack in the door. Since there is a danger for finger or clothes to be caught in between door and column in the entrance when door is opened, avoid contact with door. In particular, please let children be careful.

Old and feeble person or children should be accompanied by guardian. When operation was stopped due to abrupt accident, accident may occur due to ignorance of action matters, and also accident may occur due to operation mistake.

CAUTION Please abstain from loading of excessive cargo into passenger elevator. Too heavy things may lean to one side and then elevator may lose weight balance, which may cause trouble of surrounding units.

DANGER When one was locked in elevator due to power failure or trouble, do not attempt to escape and ask help of elevator manager by pushing of interphone, and then wait calmly until rescue. Unnatural escaping may induce accidents such as falling or being caught in.

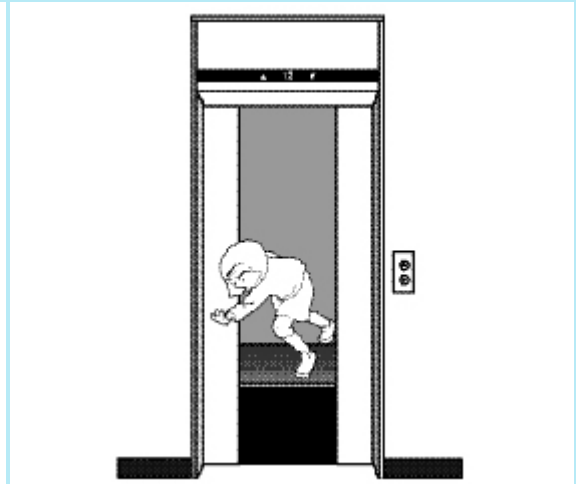

CAUTION Don't smoke within elevator. Fire can happen. Upon emergency rescue, smoking may cause problems in ventilation and fire.

DANGER When elevator entrance door was opened, please get on and off after confirming whether elevator arrived in normal position. When door is opened in a position that is not normal position, one may fall or be injured.

 Don't lean against the elevator door or don't kick it. Elevator may stop due to abnormal movement of elevator or elevator door may be detached, which may cause fall into elevator way inside.

 Don't let clothes or line be caught between doors upon going in and out. When elevator moves, person may be pulled and injured.

 Don't open door by force in entrance hall. One may fall into elevator way.

 When it is crowded, don't get on and off at one time, and wait the order. When front person falls, accident may happen.

Don't insert stick into elevator gap. One may be injured due to the trouble of elevator safety device in th gap.

Since Emergency exit is not escape exit, don't open it from elevator inside. Forced emergency escape may cause accident such as fall.

When rescue team from outside saves person, be sure to move following the order of rescuer. Arbitrary action may cause danger to onself or other person.

When there is an operator, be sure to follow operator's guide. When it is operated automatically, be sure to observe matters to be attended stuck to elevator interior.

Please abstain from using of cell phone or wireless unit within elevator, if possible. Electromagnetic wave may cause malfunction of safety device.
